
SaltStack extension to handle generic SAP operations

Release 1.0.0

'Benjamin Wegener, Alexander Wilke'

Nov 25, 2022

CONTENTS:

1	Complete List of sap	1
1.1	Execution Modules	1
2	Indices and tables	3
	Python Module Index	5
	Index	7

COMPLETE LIST OF SAP

1.1 Execution Modules

`saltext.sap._modules.sap`

SaltStack extension for SAP Copyright (C) 2022 SAP
UCC Magdeburg

1.1.1 `saltext.sap._modules.sap`

SaltStack extension for SAP Copyright (C) 2022 SAP UCC Magdeburg

SAP general functionality execution module

SaltStack execution module for general SAP system control.

codeauthor

Alexander Wilke, Benjamin Wegener

maturity

new

depends

requests sap_hostctrl sap_control

platform

All

This module implements functions for controlling SAP systems.

`saltext.sap._modules.sap.__virtual__()`

only load this module if all libraries are available

`saltext.sap._modules.sap.get_system_data(sid, username, password, verify=True, **kwargs)`

Retrieves information about an SAP system installed on the host. The function returns a dictionary with system information. The information retrieved depends on the system type.

Note: Requires `service/admin_users = <username>` in *every* instance profile or in the DEFAULT profile of the SAP System.

Note: Requires `service/admin_users = <username>` in the SAP Host Agent profile if `username != sapadm`.

sid

ID of system to get.

username

User for authentication, i.e. `sapadm`.

password

Password for authentication.

verify

Verify SSL connection, default is `True`.

CLI Example:

```
salt "*" sap.get_system_data sid="S4H" username="sapadm" password="Abcd1234!"
```

INDICES AND TABLES

- `genindex`
- `modindex`
- `search`
